(54) Title: NETWORK RECORDING SYSTEM, RECORDING SERVER, AND TERMINAL DEVICE

(57) Abstract: A network recording system includes a recording server and a terminal device. The terminal device includes a receiving unit operable to receive a designation of a program to be recorded, from a user, a selecting unit operable to select a user profile to which the user belongs, out of a plurality of user profiles, and a transmitting unit operable to transmit recording instruction information to the recording server, where the recording instruction information includes a combination of a program ID identifying the program to be recorded and user profile information showing the user profile to which the user belongs. The recording server includes a reception unit operable to receive the recording instruction information from the terminal device, a recording unit operable to record the program identified by the program ID included in the recording instruction information, and a counting unit operable to count, for each of the plurality of user profiles, a number of times each program ID has been received by the reception unit.
